## ESMO Course in Medical Oncology for Medical Students

This course, aimed at fourth and fifth-year medical students, provides an insight into medical oncology, enabling students to get a better picture of this interesting and challenging professional field, before selecting their specialisation.

“The ESMO Course in Medical Oncology for Medical Students 2025 was truly the best educational experience I could have asked for. All the workshops were very engaging, the keynote lecture was inspiring, and the networking event was fantastic. The Valencia facilities were excellent and made the whole experience smooth and enjoyable. What made it truly unforgettable was meeting other students who are equally motivated and passionate about oncology — it created a unique sense of community and shared purpose. Overall, this was an enriching international learning experience for undergraduate medical students, and I am grateful to have been part of it.”

**Paula Medio Torrubiano**, Valencia 2025

“I would strongly recommend this course to any medical student with a genuine interest in oncology. The program is exceptionally well-structured, reflecting the considerable effort invested in making it both educational and engaging. I particularly valued the balance between interactive activities and in-depth lectures, which enabled us to explore cancer treatment at an advanced level. This experience offered insights and knowledge rarely available in standard medical curricula, making it an invaluable opportunity for anyone seeking a deeper understanding of oncology.”
